Center for Integrated Area Studies

The Center for Integrated Area Studies (CIAS), Kyoto University has remained extremely active since its founding five years ago. The Center set up its services as a nationwide joint-use facility on a trial basis in the academic year 2006 and by 2008, had become official. In 2010, the Center became a cooperative research facility and joint research center. CIAS is now an organization fully dedicated to facilitating cooperation among various related organizations working on area studies in Japan and abroad, as well as contributing to the broader development of area studies itself. As a facility promoting joint research programs, the Center supports cross-disciplinary and cross-regional research activities. At the same time, CIAS also aims to apply the latest informatics techniques to area studies for the sharing of area information and development of "area informatics."

Welcome to CIAS

The Center for Integrated Area Studies (CIAS) in Kyoto University was established in April 2006 to promote and conduct area studies. As an interdisciplinary field of research and scholarship, Area Studies aims to reconstruct holistic images of particular geographical, national, or cultural regions; that is, Area Studies requires comparative research and informatics to accumulate, integrate, and analyze various research resources and knowledge from particular areas and then share them to academic communities and societies.

Integrated Area Research is expected to reconstruct holistic images of areas. It comprises comparative studies that attempt to shed light on contemporary issues in particular areas by examining phenomena across boundaries of areas and research domains. To carry out Integrated Area Research, CIAS supports the various collaborative projects by researchers in various fields from other institutions. These projects focus on two aspects of Integrated Area Research, namely, methodologies and selected crucial issues.

The field of Area Informatics refers to the use of information science/technologies to integrate and share research resources and knowledge on areas. CIAS hosts a variety of databases on area studies, using Resource Sharing System to integrate these databases with other databases on the Web. CIAS has also developed a number of information tools, such as a database builder, which supports researchers in constructing databases; spatiotemporal tools, which

can be used to visualize and analyze data from the Resource Sharing System; and application programming interfaces (APIs), through which researchers can create their own applications for parsing CIAS databases. Recently, CIAS introduced Web semantic technologies to realize advanced data integration and analysis. These databases, tools, and technologies contribute to the promotion of integrated area research.

CIAS has developed and promoted unique area studies by closely using integrated area research and area informatics, achieving remarkable results. Examples include the Aceh Tsunami Mobile Museum, which is an application of the database builder in disaster management research, and Grid City, which is a multimedia scholarly book that links texts with related images in the database using API.

CIAS has carried out its mission with the indispensable support of the network of researchers engaged in collaborative projects as well as the network of information systems; we are grateful for the support and hope to continue receiving such support in the coming years.

HARA, Shoichiro (Ph.D.)

Director and Professor

Center for Integrated Area Studies, Kyoto University

2

New Approach to Area Studies

Area Studies is an interdisciplinary field whose primary focus is globalization, including the social, political, economic, natural, and cultural relationships that exist within and extend beyond the boundaries of nation-states. Area Studies explores issues that increasingly affect all societies, such as the following:

- rapid and far-reaching environmental and technological changes
- the proliferation and impacts of communication media and other technologies
- transnational economic interactions, including trade, capital, and labor flows
- processes of cultural, social, economic, religious, and linguistic homogenization and differentiation
- diaspora and transnational migratory movements and processes
- the health and environmental consequences of transnational political, economic, and social processes

A central goal of Area Studies is to develop cross-border and holistic perspectives on global interconnections and interdependencies. Meanwhile, this academic field is also developing an appreciation of how globalization processes affect and express themselves in particular regions and localities, primarily through case studies, advanced language and literature study, and optional, but highly recommended, studies abroad.

3

Gateway of Area Studies in Japan

Through the Japan Consortium for Area Studies (JCAS) and its activities as a joint usage / research center, CIAS plays the role of gateway to area studies in Japan.

Japan Consortium for Area Studies (JCAS)

JCAS is an academic community for area studies based on a completely new form of organizational cooperation. Consisting of educational and research organizations, such as universities and research institutes that are engaged in international area studies, academic societies, and private organizations closely involved in area studies, JCAS promotes information exchange and research activities that go beyond the framework of organizations. It was founded in 2004; as of the end of December 2014, it has 97 member organizations.

JCAS undertakes a variety of activities based on five mottos: 1) design area studies, 2) go beyond the boundary of disciplines, 3) expand the network, 4) connect with civil society, and 5) establish the information infrastructure. Examples include supporting the next generation of area studies researchers through the implementation of project recruitment programs, facilitating joint research planning among member organizations, promoting collaborations between academic societies in different disciplines, and offering on-demand seminars.

The JCAS annual meeting, in addition to being a forum for reporting on various JCAS activities, has become a venue for

member organizations to showcase their capabilities and establish networks, through which joint studies that go beyond the boundary of their organizations could be launched. Winners of the JCAS Awards (the research project, research plan, budding project, and social collaboration awards) are announced and awarded at the annual meeting as well.

Since the establishment of JCAS, CIAS has assumed its administrative function: managing various project recruitment programs related to area studies, editing the JCAS Review, and taking initiatives in such areas as public relations and information infrastructure development. Visit the JCAS website at <http://www.jcas.jp>.

4

CIAS Area Informatics Project

In area studies, researchers analyze natural, social, and cultural settings using an interdisciplinary research approach. Since the 1990s, when people in even the most remote locations of the world began to feel the effects of globalization, the number of area studies researchers has increased dramatically. Subsequently, information on many locations worldwide began to be assembled and synthesized.

Simultaneous to this revitalization of area studies, information technology for processing data advanced greatly, boosting the field of informatics and finding new applicability in applied sciences, such as area studies.

In April 2010, CIAS launched the Area Informatics Project, which aims to apply state-of-the-art information technology to combine and analyze data produced in area studies research. Its overarching goal is to construct a basic platform for a wide range of area studies data to enable sharing between different institutions and enhance the presentation of study results.

The Area Informatics Project comprises two parts, namely, a resource sharing system and a construction of an integrated database. This resource sharing system is a common platform that allows cross-searching of different types of information stored in various institutions. An integrated database is one with a gateway through which information input can be done easily. It also enables map visualization using a time slider function, which helps reveal potential interactions with information. For example, users without special informatics knowledge can create a map-based database.

5

CIAS Prestigious Resources

CIAS has a collection of information resources from areas worldwide obtained by staff members as area studies researchers utilizing their unique perspectives and networks. A part of these resources have been made available at the CIAS library. Other resources have been entered in a database using the latest area informatics techniques promoted by CIAS. The main collections are introduced below.

Attempts to retain, share, and make modern use of historical materials

Malay Periodicals Collection

It includes ten Malay periodicals published in the mid-20th century in Malaysia as well as their digital data. In the past, materials on Islam in Southeast Asia, especially literature in Jawi (Arabic alphabet for writing Malay and Indonesian), were not systematically collected and organized anywhere in the world. With the comprehensive acquisition of these materials, this collection has become an extremely important primary reference for research and education on Southeast Asia.

With the Malay magazine *Qalam* (1950 to 1969) in particular, we have undertaken such initiatives as publishing Roman alphabet transliteration versions and creating an online public database of articles. We are currently creating a database that allows searching across 1,001 titles of Malay magazine articles.

Turkestanskii Sbornik Database

This collection comprises Central Asia-related publications after the Central Asian conquest of the Russian Empire and during the period between the late 19th century and the beginning of the 20th century. Originally intended as an encyclopedia on Central Asia for Russians, it is one of a kind in the world as a collection. All 594 volumes at the Alisher Navoi State Library of the current Republic of Uzbekistan have been digitized in cooperation with the library, and the CIAS library holds the CD version. CIAS is currently creating a database of the entire collection in addition to organizing the bibliographic information.

Valuable Primary References

Sendero Luminoso-related Documents

Peruvian journalist Gustavo Gorriti compiled a microfilm collection of documents from the 1960s to the 1980s. This collection features the internal documents of Sendero Luminoso (the Maoist guerrilla insurgent organization that started an armed conflict in Peru in 1980) and his affiliated organizations, including those under Luminoso's predecessor, as well as records prepared by the army and police. This compilation is considered the most comprehensive collection of references related to Sendero Luminoso. Princeton University took the actual documents donated by Gorriti in the early 1990s and turned them into

microfilm to make them available for browsing at their library as “Documenting the Peruvian Insurrection.” Instituto de Estudios Peruanos in Peru, which had received its microfilm version and made it available for use in Peru, donated a copy of the microfilm to CIAS on the basis of the memorandum of understanding (MOU) signed in 2010. CIAS is currently considering making these valuable references available by obtaining agreement from the Instituto de Estudios Peruanos in Peru and Princeton University Library.

An attempt to visualize the learning activities of pioneers in area studies by using the area informatics approach

Yoneo Ishii Collection

This collection of materials, such as books, research documents, and photographs taken in the study area, was compiled between 1957 and 2010 by the late Yoneo Ishii (1929–2010), a professor emeritus at Kyoto University. Among them, about 10,000 items are shelved at the CIAS library to reproduce his home library down to the order of books. The collection includes important literature on Southeast Asian studies, including the history of Thailand, and linguistic studies, among others. A database and virtual bookshelf that enables ontological search based on keywords extracted from bibliographic information was also released in 2014.

Videos and films from around the world as area studies materials

Malay Local Movie Collection

This collection is a database of feature films mainly consisting of movies produced in Malaysia (Federation of Malaya) after 1933. It also includes unscreened works, such as television and short films. More than 90% of the approximately 1,200 feature film titles produced in the Malaysia area—from classic Malay movies by P. Ramlee, who was called “the father of Malay movies,” to the new wave of Malay movies typified by Yasmin Ahmad and to even recent films co-produced with such countries as Japan—are available in electronic media.

Thai Video Collection

A collection of Thai visual materials, such as movies (many VCDs and recently popularized DVDs), are held at the Center for Southeast Asian Studies (CSEAS) library (approximately 800 titles) and the CIAS library (342 titles), each along with related literature and posters. This collection includes local blockbusters and feature films released in Japan as well as local folk art, documentary films, preaching by prominent Buddhist monks, and even footages of the coronation of Rama VII and IX (the current king) and videos (copies) recorded by Rama VII himself.

Tamil Language Film Collection

The CIAS library holds 150 Tamil-language films (produced from the 1960s to the 1990s) donated by Dr. M. Nadarajah. The library has also jointly created a brief note on the content per movie with the Public Media Agency in Malaysia and is currently preparing an online Tamil-language film database available to the public, through which users can search by title, director, actor, and other credited professionals involved in filmmaking.

The World’s Leading Collection

The Kyocera Collection British Parliamentary Papers

This compilation of references contains a total of 12,000 volumes of various documents submitted to the British Parliament (House of Commons documents from 1801 to 1986 and the House of Lords documents from 1801 to 1922). It is a nearly complete collection with the least number of missing or damaged volumes compared with all other existing British Parliament documents held at the former British Board of Trade. The collection is held at the Kyoto University Library. The online version of the House of Commons Parliamentary Papers is available on campus. A database of extracted illustrations is also available.

The CIAS database can be accessed here:

<http://www.cias.kyoto-u.ac.jp/en/database/>

6

International Research Cooperation

International Research Cooperation

The CIAS mission requires extensive international collaboration. In expanding its efforts, CIAS capitalizes on the international networks of its staff to establish collaborations with research institutions and individual researchers who share CIAS's

interests and objectives.

Forms of collaboration include joint projects, MOUs, international conferences, and peer-to-peer partnerships. The following is a list of current MOUs with research organizations worldwide:

The Center for International Forestry Research	Republic of Indonesia
Faculty of Agriculture, National University of Laos, Lao P.D.R.	Lao People's Democratic Republic
Faculty of Forestry, National University of Laos, Lao P.D.R.	Lao People's Democratic Republic
Faculty of Social Science, National University of Laos, Lao P.D.R.	Lao People's Democratic Republic
The Center for Asia-Pacific Area Studies, Research Center for Humanities and Social Sciences, Academia Sinica	Taiwan
The Sultan Ageng Tirtayasa University	Republic of Indonesia
The Research Center for Nepal and Asian Studies, Tribhuvan University	Federal Democratic Republic of Nepal
Tropenbos International	Kingdom of the Netherlands
The Institute of Peruvian Studies	Republic of Peru
The Royal University of Agriculture	Kingdom of Cambodia
The Royal University of Fine Arts	Kingdom of Cambodia
The Faculty of Nursing, Kohn Kaen University	Kingdom of Thailand
Sherubtse College, Royal University of Bhutan	Kingdom of Bhutan
The Social Research Institute, Chulalongkorn University	Kingdom of Thailand
The Tsunami and Disaster Mitigation Research Center	Republic of Indonesia
The University of Riau	Republic of Indonesia
The IUFRO Special Project on World Forests, Society and Environment	Republic of Finland
The Peruvian Institute of Amazon Research	Republic of Peru
Klasika Media	Malaysia
The Department of Geography, University of Leicester	United Kingdom of Great Britain and Northern Ireland
Perbadanan Kota Buku	Malaysia
The Graduate School, Silpakorn University	Kingdom of Thailand

CIAS regularly organizes international meetings directly related to its programs to report research outcomes and foster academic debate. Where possible, these symposia are co-organized with national or international partners. The symposia are presented at the Inamori building, where CIAS is located, to make use of the building's state-of-the-art facilities. These events are also frequently hosted by CIAS collaborators.

Under the Division for Visiting Researchers, CIAS invites researchers from abroad to foster academic exchange and contribute to skills transfer. These visiting researchers are linked to ongoing research collaborations where possible. Visiting researchers have the opportunity to concentrate on their own work for a six-month period during their stay. Where possible, their activities are integrated with CIAS events, such as international symposia.

In addition to their travel to research sites, CIAS staff are encouraged to visit other area studies research institutions abroad to strengthen collaborative efforts.

CIAS International Visiting Scholars Program

One of the main objectives of CIAS is to foster exchange among scholars. To this end, CIAS has developed two exchange programs. One program invites international scholars from abroad to CIAS, and the other invites scholars from within Japan.

These two programs provide opportunities for researchers to pursue interests linked to area studies while staying at Kyoto University. The exchanges contribute to the advancement of area studies, and the presence of visiting scholars at CIAS increases awareness of CIAS and Japanese area studies in general in the national and international academic community. Visiting scholars also contribute to area studies research activities at CIAS. Invited candidates are not only scholars from the academe but also those in other positions relevant to area studies, such as NGO/NPO activists, staff of international organizations and funding organizations, and journalists/writers.

CIAS Research Map

Frontiers of Area Studies

The purpose of this publication series is to call for outstanding research results in Japan and abroad, have them screened and reviewed by the editorial committee of experts outside of academics, and then release them as commercial publications from Kyoto University Press. The publication is considered part of the activities of CIAS as a joint usage / research center. In particular,

we aim to share studies that compare areas and focus on their relationships as well as information related to area studies. Further, we publish promising research results with an eye to breaking new ground for area studies, such as area informatics, as we seek to become an international information channel that explores the frontier of area studies.

Journal in Area Studies

CIAS biannually publishes JCAS Review, a Japanese academic journal edited by the editorial committee under JCAS. It features articles that consider global issues from the perspective of area studies as well as papers curated through open submission and review.
